

X10 NITROGEN EXTENDER, NITRIFICATION INHIBITOR

Benefits of X10

X10 is an efficient cost effective additive that can greatly extend turf color

- **Extended green color.** X10 is 99% Dicyandiamide (DCD). When used at recommended rates, color and nitrogen uptake can be extended up to 16 weeks
- **Treat all the nitrogen.** X10 is a white powder concentrate that can easily be added to blended NPK fertilizer or tank mixed with liquid fertilizers. Once applied to the turf, X10 will begin the process of nitrification inhibition to ALL nitrogen in the soil profile.
- **Green up variation.** X10 can be added to any variety of nitrogen compound from quick release to slow release nitrogen thus improving nitrogen efficiency to any nitrogen element.
- **High-quality turf color.** X10 will help maintain longer greening and reduce roller coaster effects of greening.
- **Less clippings.** X10 will reduce and control the amount of conversion of ammonium nitrogen to nitrate nitrogen thus drastically reducing the quick uptake causing excessive top growth.
- **Economical.** X10 can economically be added to an LCO's current favorite fertilizer formula for fractions of the cost of competitive products.
- **Environmentally friendly.** X10 contains dicyandiamide a proven product used in the reduction of nitrate leaching.
- **Performs consistently regardless of soil temperature.** X10 is not dependent on a certain soil temperature to increase or decrease its effectiveness.
